Hyderabad, Telangana, India

Summary

I'm a Generative AI Engineer with 2 year of hands-on experience building LLM-powered applications, RAG systems, enterprise AI assistants, and automation solutions for real business use cases. Over the last year, I've designed and deployed Copilot Studio agents and Teams-integrated AI bots that streamline processes like code generation, HR automation, leave management, and IT ticketing—improving response time and user experience across teams. I specialize in Retrieval-Augmented Generation (RAG) and conversational AI, building systems with semantic search, vector embeddings, PDF understanding, meeting transcript analysis, and intelligent document processing using tools like LangChain, FAISS, Hugging Face, and Azure AI Foundry. My experience includes: Architecting voice-based chatbots with STT + TTS pipelines for natural, human-like interactions Building AI applications using Azure Cognitive Services, Azure OpenAI, and OpenAI APIs Developing front-end AI tools with Streamlit and Gradio Creating prompt templates, optimizing LLM responses, and fine-tuning model behaviour Integrating AI systems with Microsoft Teams, Power Apps, and Power Automate Delivering production-ready solutions that support real workflows and enterprise operations I'm passionate about Agentic AI, automation, NLP, and GenAI-driven problem solving. My goal is to build scalable, meaningful AI systems that improve efficiency and empower businesses and users. Open to opportunities in AI Engineering, Generative AI development, and ML roles—especially those involving enterprise AI, LLMs, RAG, and Azure AI ecosystems.

Experience

ProV International
Gen AI Engineer

September 2024 - Present (2 years)

India

Designed and deployed enterprise-grade conversational AI agents using Microsoft Copilot Studio, integrating with Power Apps, Power Automate, Microsoft Teams, and internal business systems to automate workflows and improve operational efficiency. Built and maintained 7+ production copilots including HR Assistant, Invoice Intelligence Bot, Document Insights (RAG), Study Scheduler, and ServiceNow automation agents using Copilot Studio and Azure OpenAI. Developed and optimized Retrieval-Augmented Generation (RAG) pipelines using Azure AI Foundry, Azure AI Search, embeddings, and Blob Storage, enabling accurate context-aware responses with source citations. Integrated Azure OpenAI services into enterprise applications for conversational AI, document Q&A, and workflow automation use cases. Designed and implemented custom connectors and REST APIs for Azure SQL, Dataverse, SharePoint, and ServiceNow to enable AI-driven actions and plugin-style integrations across systems. Implemented prompt orchestration, response guardrails, and safety filters to ensure reliable and secure AI outputs across copilots. Developed Python-based AI services and Flask APIs integrated with vector databases (FAISS) and LLMs to enable semantic search, multilingual querying, and OCR-based document understanding. Built scalable document intelligence pipelines with OCR, embeddings, and vector search, supporting scanned and multilingual enterprise documents. Integrated copilots with Microsoft Teams and enterprise tools, reducing manual workload by ~70% and improving employee productivity. Engineered a company-wide AI (MoM - Minutes of Meeting) generator using SharePoint APIs and LLMs, saving 100+ hours/month and reducing licensing costs. Designed modular vector database architecture supporting document classification, JD-CV matching, and enterprise search use cases. Implemented telemetry, logging, and monitoring for AI copilots to track usage, performance, and reliability in production environments.

Education

RAJIV GANDHI UNIVERSITY OF KNOWLEDGE TECHNOLOGIES,
SRIKAKULAM

Bachelor of Technology - BTech, IIIT

Zilla Parishad High School

High School , Theoretical and Mathematical Physics

RAJIV GANDHI UNIVERSITY OF KNOWLEDGE TECHNOLOGIES,
SRIKAKULAM

Bachelor's Degree

RAJIV GANDHI UNIVERSITY OF KNOWLEDGE TECHNOLOGIES,
SRIKAKULAM

High School Diploma
