CAREER SUMMARY:

Generative AI Engineer with 2 year of experience specializing in **Copilot Studio**, **RAG** applications, and **multi-agent AI systems**. Skilled in **Python**, **LangChain**, **Power Automate**, and **Azure AI**, with a proven record of building scalable and intelligent automation solutions. Passionate about creating **Agentic AI** systems that combine reasoning, automation, and conversational intelligence to enhance enterprise workflows.

PROFESSIONAL EXPERIENCE:

Junior Gen AI Engineer

ProV International ,Chennai

09/2024 - Present

- Designed and deployed enterprise-grade AI applications using **Generative AI**, **LLMs**, and **Agentic AI** workflows, enabling automation of business processes and intelligent decision-making.
- Built and maintained 7+ production-grade AI copilots using **Microsoft Copilot Studio**, Azure OpenAI, Power Automate, and Teams, automating workflows such as HR support, ServiceNow ticketing, invoice intelligence, and document insights, **reducing manual effort** by ~70%.
- Developed and optimized **Retrieval-Augmented Generation (RAG)** pipelines using **Azure AI Foundry**, **Azure AI Search**, **embeddings**, and **Blob Storage**, enabling accurate context-aware responses with source citations.
- Integrated **Azure OpenAI services** into enterprise applications for conversational AI, document Q&A, and workflow automation use cases.
- Designed and implemented custom connectors and **REST APIs** for Azure SQL, Dataverse, SharePoint, and ServiceNow to enable AI-driven actions and plugin-style integrations across systems.
- Implemented prompt orchestration, **guardrails**, and response validation mechanisms to ensure reliable and secure AI outputs while minimizing hallucinations.
- Built scalable Python-based backend services and Flask APIs integrated with **FAISS vector databases** and LLMs for semantic search, multilingual querying, and OCR-based document intelligence.
- Prototyped a **voice-enabled Copilot-style** chatbot using **STT/TTS** with a RAG backend, demonstrating multimodal conversational AI capabilities for customer support scenarios.

PROJECTS:

ProV DocSense AI (Enterprise RAG + OCR System)

- Developed an enterprise-grade document intelligence platform using FAISS, Google Gemini, and OCR, enabling semantic search across 2,000+ documents with retrieval time under 10 seconds.
- Designed modular, role-based vector database architecture supporting document classification, JD-CV matching, and enterprise search use cases.
- Enabled intelligent querying of scanned and multilingual documents using OCR pipelines and language-specific embeddings.

Aviation AI Maintenance Assistant (Ongoing Project)

- Currently building an AI-powered aviation assistant to analyze aircraft maintenance manuals and field logs using RAG and LLMs.
- Designing a system that retrieves information across multiple interconnected manuals, enabling engineers to quickly identify repair procedures and dependencies.
- Implementing document versioning and multi-source reasoning, addressing real-world challenges where manuals are updated periodically.
- Integrating Azure OpenAI, vector databases, and backend APIs to create a scalable, production-ready solution for aviation operations.

AI Meeting Management System

- Engineered a Python-based AI solution using SharePoint APIs and LLMs to auto-generate Minutes of Meetings (MoMs) from transcripts.
- Built recursive file processing pipelines and document generation workflows, saving 100+ hours/month and reducing licensing costs.

SKILLS:

- **Programming Languages:** Python, JavaScript (Basic), HTML, CSS
- **Frameworks:** Flask, FastAPI, Streamlit, LangChain, LangGraph, Langflow
- **Tools:** Copilot Studio, Power Automate (Basic Cloud & Desktop Flows), ChatGpt(Open API), Cursor, Claude, Gemini AI Studio, PowerApps, Dataverse, VS Code, Azure AI Foundry(Microsoft AI Foundry)
- **Concepts:** Generative AI, LLMs, RAG, Semantic Search, Agents, Prompt Engineering, Vector DB
- **Libraries:** NLTK, Pandas, NumPy
- **Vector DB:** Faiss, Pinecone
- **Soft Skills:** Problem Solving, Critical Thinking

CERTIFICATIONS:

- **Microsoft Certified: Azure AI Engineer Associate** – Issued by Microsoft
- **Copilot Studio** – Real World Copilots from Beginner to Pro
- **Azure AI Foundry:** Beginner to Pro with OpenAI & Azure OpenAI
- **Machine Learning Specialization** – Coursera (by Stanford University)
- **Generative AI for Everyone** – Coursera (by Andrew Ng)
- **AI for Everyone** – Coursera (by Andrew Ng)
- **Programming for Everybody (Python)** – Coursera
- **Master the Theory, Practice, and Math Behind ML, NLP (Ongoing)** – (by Krish Naik-Includes real-world projects with Git, Docker, and deployment)
- **Agentic AI Bootcamp with LangChain and LangGraph** (Ongoing) - (by KrishNaik)
- **ChatGPT Prompt Engineering for Developers** - Open AI & DeepLearning.AI

PASSIONS:

- Artificial Intelligence
- Data World
- Copilot Studio Agents
- Generative AI
- Large Language Model
- Agentic AI

ACHIEVEMENTS:

- Received **Quarterly Excellence Award** (Q4 2025) at ProV International for outstanding contribution and delivery in AI-driven projects.
- Awarded **Spot Awards** (2 times) for **exceptional performance**, including client appreciation and dedicated late-night support during critical POC demonstrations.
- Built and delivered high-impact AI solutions adopted at enterprise level, contributing to automation and productivity improvements across teams.
- Received **Pratibha Award** from the Government of Andhra Pradesh for securing **First Rank in Division** during Matriculation.
- Selected as a **State-Level Tennikoit Player**, demonstrating discipline, teamwork, and competitive excellence.

EDUCATION:

Rajiv Gandhi University of Knowledge Technologies - IIIT, Srikakulam	Jul 2018 - Jun 2022
Bachelor's Degree - CGPA: 8.7	
Rajiv Gandhi University of Knowledge Technologies - IIIT, Srikakulam	Aug 2016 - May 2018
Pre University Course - CGPA: 9.0
